MOBILE PRODUCT STORY

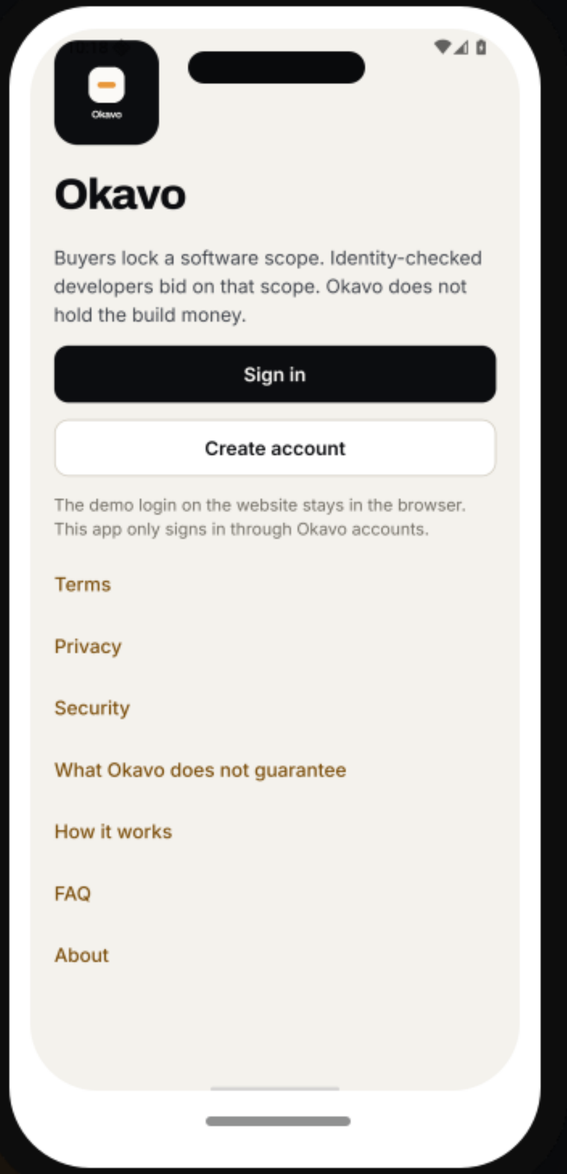

Clear scope. Credible talent.

A focused marketplace for buyers and identity-checked software developers—without pretending to hold the money.

Product approval presentation • October 2026

WHY THIS PRODUCT

Software work needs clarity before velocity

Okavo creates a structured place to define work, assess people and operate a project—without overstating platform guarantees.

01

Lock the scope

Buyers turn an idea into explicit requirements before comparing bids.

02

Make identity visible

Developers can complete identity checks and capability exams.

03

Keep claims honest

Okavo coordinates the work; it does not claim to hold buyer funds.

EVERY USER POINT OF VIEW

Four views of one marketplace

Public trust, buying, delivery and platform operations each have a distinct mobile surface.

G

Public visitor

“Explain the model before I join.”

How it works, FAQ, terms, privacy, security and explicit non-guarantees.

B

Buyer

“Define and manage my project.”

Requirements, projects, developer search, contracts and messages.

D

Developer

“Prove fit and win work.”

Bids, identity upload, exams, contract work and earnings visibility.

A

Administrator

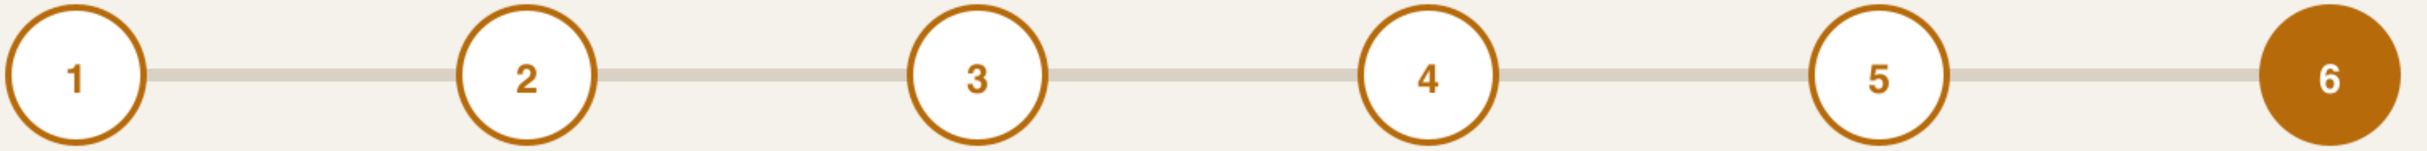

“Operate a trustworthy market.”

Review queues, account controls, operational actions and audit trails.

MARKETPLACE JOURNEY

From requirement to accountable delivery

The product makes each transition visible so participants know what changed and who acts next.

Define	Discover	Bid	Contract	Collaborate	Operate
Write requirements	Search talent	Compare proposals	Agree the work	Message + files	Track outcomes

PAYMENTS REMAIN DISABLED UNTIL A VERIFIED MONEY FLOW EXISTS

BUYER EXPERIENCE

Structure the work before choosing the team

Buyers can move from an initial requirement to an operating project without losing the decision trail.

R Requirements

- Create and refine project needs
- Make scope explicit
- Keep requirement history visible

P Projects

- Buyer project portfolio
- Status-aware project detail
- Clear next actions

S Developer search

- Find relevant specialists
- Review visible qualifications
- Move from profile to conversation

C Contracts + messages

- Contract workspace
- Project-linked conversations
- Files and download handling

DEVELOPER EXPERIENCE

Show evidence, submit a bid, deliver the work

Developers get a professional path from identity and capability evidence to proposals, contracts and earnings records.

B Bids

- Discover bid opportunities
- Submit structured proposals
- Track bid state

ID Identity

- Upload identity evidence
- Camera and file support
- Review status visibility

E Exams

- Capability-assessment flow
- Visible completion state
- Evidence attached to the profile

₹ Work + earnings

- Contract workspace
- Project communications
- Earnings records without custody claims

ADMINISTRATION

The operating layer behind marketplace trust

Administrators see queues and actions that buyers and developers should never need to understand.

Q Review queues

- Identity review workflow
- Status and decision visibility
- Focused operational triage

U User operations

- Role-aware account handling
- Operational account actions
- Anonymisation support

L Auditability

- Recorded sensitive actions
- Admin-only controls
- Traceable operational state

! Boundary control

- No enabled payment custody
- Explicit non-guarantees
- No demo-login shortcut in app

TRUST AND PRIVACY

Credibility comes from boundaries

Okavo is explicit about what it secures, what it records and what it does not guarantee.

S Session security

- Rotating authenticated sessions
- Secure device token storage
- Role-aware route protection

F File handling

- Camera and file-picker support
- Controlled uploads
- Safe file downloads

N Notifications

- Action-oriented mobile alerts
- Deep-link aware routing
- Permission-aware behaviour

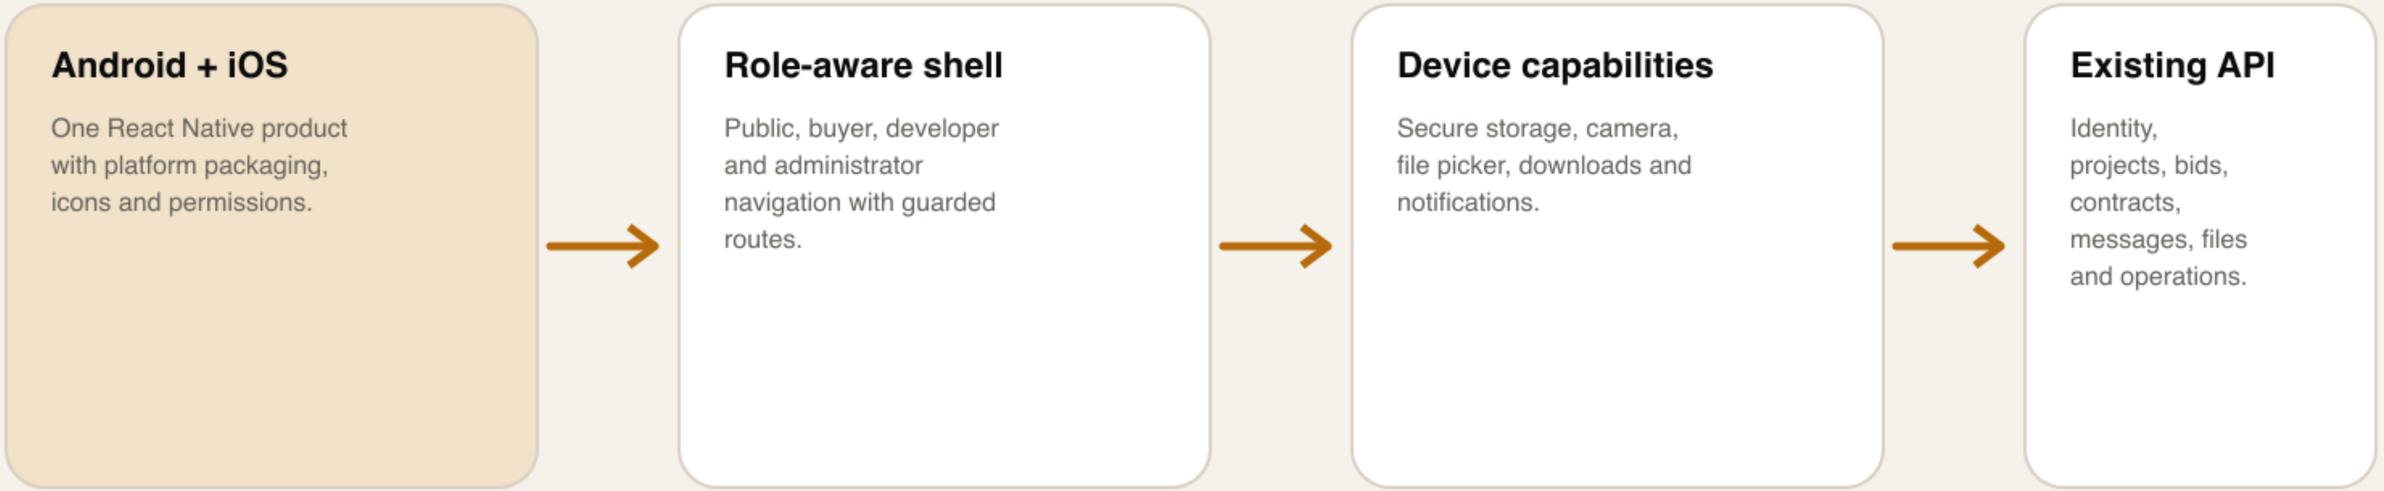

D Data lifecycle

- In-app deletion request
- Anonymisation path
- Legal and security pages

MOBILE ARCHITECTURE

A fully native operational shell

Role-sensitive product flows run in React Native while the existing API remains the authoritative business layer.

NATIVE: ALL PRIMARY USER JOURNEYS

BROWSER: PUBLIC LEGAL/SUPPORT LINKS

GUARDRAILS: ROLES + ROTATION + AUDIT

QUALITY EVIDENCE

Critical roles tested as real mobile paths

The release evidence spans public entry, authenticated roles and device-specific capabilities.

4
user perspectives

API 36
Android emulator verification

Hermes
iOS JavaScript export

OFF
payments intentionally disabled

- ✓ Release APK built and installed
- ✓ Type, lint and automated tests passed
- ✓ Role-specific navigation exercised
- ✓ Architecture and release runbooks included

STORE READINESS

Prepared for final signing and review

The app has not been approved by either store. Owner credentials and full signed iOS validation remain mandatory.

READY NOW

- ✓ Branded icon, public home and role experiences
- ✓ Android release build and device verification
- ✓ iOS export verification and native project
- ✓ Deletion, privacy, security and legal entry points
- ✓ Architecture, testing and release documentation

BEFORE PUBLIC LISTING

1. Provide Apple signing and App Store Connect access
2. Provide Google Play Console access and signing
3. Run signed iOS build and device capability tests
4. Complete privacy and marketplace declarations
5. Capture final listing media and submit

WHY APPROVE

A serious marketplace in a small-screen format

The mobile product makes Okavo’s strongest idea more accessible: clearly defined work matched with visible evidence.

C

Clarity

Requirements, bids and contracts stay connected to the work.

T

Trust

Identity, roles and audit boundaries are visible without inflated guarantees.

M

Mobility

Messages, files and decisions can move with the people doing the work.

APPROVAL DECISION

Approve the next step: signed store builds

The product story, role model and mobile architecture are ready. The remaining gates are controlled credentials, signed iOS testing and store review.

01

Approve the marketplace experience

02

Release store credentials and assets

03

Run final signed builds and submit
